

Designed by Rotarians ... For Rotarians!

ClubRunner is the leading software provider for Rotary clubs and districts worldwide.

Already in use by thousands of Rotary clubs and districts, ClubRunner offers a robust database management and communication system for clubs and districts, complete with attendance reporting, event and volunteer management, website and directory modules and email broadcast services. In use by thousands of Rotary clubs for over 8 years, ClubRunner is a proven, mature software solution for clubs and districts looking to implement an online, database driven membership management system.

In use by 8 of the first 10 Rotary clubs and prestigious clubs such as Los Angeles, Boston, New York, San Francisco, Oakland, and Toronto, ClubRunner is designed not just for large clubs but is suited for and used by small and medium sized clubs. In addition to database management, ClubRunner is designed to improve membership retention and growth, public relations and image, and the efficiency of a club's operations.

Our Brief History

ClubRunner celebrated its 8th year of operation in April of 2011, but many customers today may not know our history. Started in District 7080 in Ontario, Canada, ClubRunner began as a project by the District 7080 Internet Chair Adel Asterbadi, a long time Rotarian and Past President of the Mississauga City Centre Rotary Club. As a software provider for major banks and insurance companies, his company, Doxess Technologies (ClubRunner's parent company), was already adept at using the latest technology to manage online databases, generate dynamic documents and perform time saving work flow functions within an organization. Working closely with District 7080 and the Mississauga City Centre Rotary Club, he took this experience and adapted it to the way Rotary clubs work. After creating a district version, the club and zone version soon followed.

The need was so great within Rotary that ClubRunner expanded quickly to span all **six continents worldwide** with the most clubs in the United States, Canada and Australia. With the introduction of multilingual versions in 2011, ClubRunner is now available in 5 languages and growing.

Today, ClubRunner is continuing its investment into the Rotary community, and is constantly updating and adding new features to enhance the suite of club operations and administration. In fact, **ClubRunner led the way with the RI Integration Project and was the first vendor to integrate its databases with Rotary International.** This synchronizes membership and club information between ClubRunner and with RI's database while maintaining full control and privacy to Rotary Clubs and Districts. **With the largest user base of any software company within Rotary**, ClubRunner shares a close relationship with Rotary International to better align its direction with the future vision of Rotary clubs and districts.

The ClubRunner Advantage

- **Rotarian owned and operated, with 3 Past President Co-founders**
- **First software provider to synchronize member data with Rotary International**
- Largest user base within global Rotary community
- Award winning Microsoft Certified Partner company
- Over 20+ years experience in enterprise application and communications
- Dedicated support team, ongoing training and toll-free technical support
- Continued investment into product improvements

Did you know that ClubRunner...

- Has the largest user base within global Rotary community
- Has grown at an annual growth rate of 100% within Rotary since its 2003 launch
- Is the first vendor to integrate its database with RI
- Is supported by an established company with over 20 staff members

A Complete Package for Rotary...

ClubRunner is a complete platform for all levels of Rotary, including Clubs, Districts and Zones, with full data integration. As a complement to all 3 levels, MyEventRunner™ manages complex event registrations and payment and integrates with the ClubRunner database. ClubRunner is integrated with the RI database to synchronize updates automatically whenever changes are made at any of the 3 levels, thereby completely eliminating the need to duplicate any data entry.
